

A Quick Reference to Speech and the Audiogram

provided as a public service by EDEN - The Electronic Deaf Education Network - www.bradingrao.com

NOTES:

1. The blue shaded area shows the range of average conversational speech.
2. Approximately 50% of average conversation occurs at levels quieter than (above) the dotted blue line.

Copy your child's un-aided (O and X) and aided (A) thresholds from their most recent audiogram to see what speech sounds they might be missing.
